

SWIMMING POOL LINERS CATALOGUE

CGT Liners

CGT Liners uses cutting-edge materials in order to deliver highest quality swimming pool liners to the pool industry of Cyprus. CGT liners are made in Canada and are considered ideal for both commercial and residential pools. Being adaptable to the most complicated shapes, will make the life of the pool constructor easy and will allow the pool owner to choose the pattern that best fits his/her taste. The liner will function as a protective shield that will prevent water leakage, mold and cracks, resulting from daily usage and exposure of the pool to harmful UV rays, chlorine and the weather elements. It is very easy to clean and maintain. Even when it comes to welding tight corners, complicated shapes and unusual sizes, our swimming pool liners offer the ultimate in flexibility.

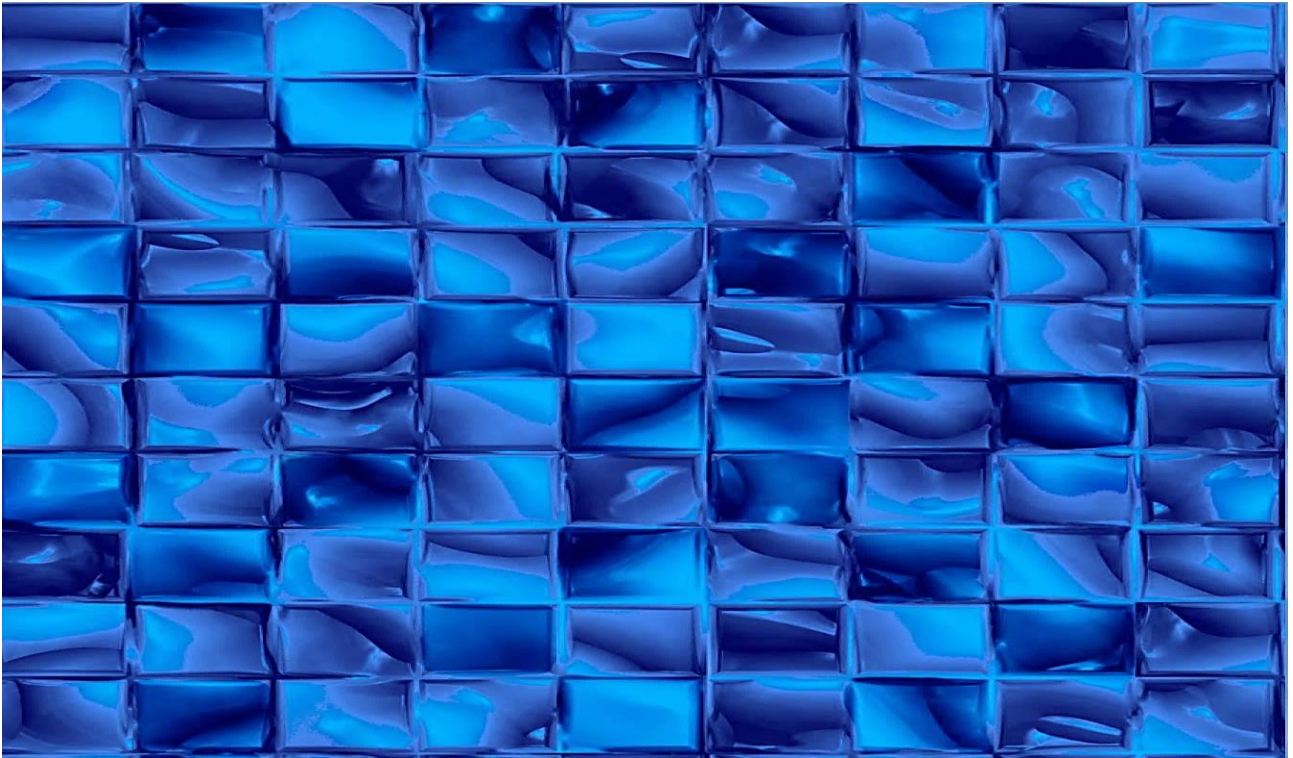

CGT liners are distinguished by their exceptional strength. The material which incorporates a polyester reinforced mesh is 1.5 mm thick, enables it to withstand intensive use and severe knocks from even the most enthusiastic swimmers. It also has a special formula that includes a UV stabilizing treatment which can endure exposure to all extremes of weather, retaining its characteristics year after year.

With a life expectancy of 15 to 20 years, CGT swimming pool liners can be used on new constructions or renovations. The liners are ready for installation in any swimming pool irrespective of shape; rectangle, oval, kidney, circular, trapezoidal, completely irregular, with or without lined steps etc.
